

**1.1 LAWA Commissioning Mission Statement:**

- A. LAX is one of the world's largest and busiest airports, and is undergoing major upgrades, involving construction of new facilities and renovation of existing facilities. Commissioning of the facilities is required to verify compliance with the Owner Project Requirements, Contract Documents and CALGreen requirements. Commissioning is a complex process bringing equipment and systems from a static to a fully operational and functional state, requiring that the Commissioning Authority participates in all of the project's stages: Predesign, Design, Construction, Testing, Acceptance, Occupancy and Operation. The LAWA Commissioning requirements are to assure that the new and renovated facilities meet or exceed local and state sustainability requirements, Owner Project Requirements and the Contract Documents, while minimizing the total cost of ownership to LAWA.
